Alexander I. Kafanov (1947–2007) was famous Soviet/Russian malacologist and paleontologist worked in different time spans in the Zoological Institute, Russian Academy of Sciences (St.-Petersburg), Pacific Institute of Geography, Far East Branch of the Russian Academy of Sciences (a branch in Petropavlovsk-Kamchatsky) and most of his life in the Institute of Marine Biology, Far East Branch of the Russian Academy of Sciences

(Vladivostok). His taxonomic interests were connected mostly with the superfamily Cardioidea Lamarck, 1809 (see more details about his career: [Editorial Board, 2007] and this volume). Below are enumerated names of new taxa described or erected by him. For each taxon of species-level group, we provide type localities and institutional location of types; ages of geological formations are given as in original publications.
